

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

Please cancel claims 1-5 and add new claims 6 through 13.

6. (new) A subpixel forming a pixel of a color display screen, comprising:  
one display portion; and  
a plurality of thin film transistors for driving the display portion, wherein  
the plurality of thin film transistors are arranged such that their channels are in parallel to each another.
7. (new) The subpixel according to Claim 6, wherein  
provided that a length of one side of the subpixel is 1, a channel width of at least one of the plurality of thin film transistors is 0.4 or more.
8. (new) The subpixel according to Claim 6, wherein  
the thin film transistors are organic thin film transistors or amorphous Si thin film transistors.
9. (new) The subpixel according to Claim 7, wherein  
the thin film transistors are organic thin film transistors or amorphous Si thin film transistors.
10. (new) The subpixel according to Claim 6, wherein  
the display portion is an organic electroluminescence(EL) element.
11. (new) The subpixel according to Claim 7, wherein  
the display portion is an organic electroluminescence(EL) element.

12. (new) The subpixel according to Claim 6, wherein the channels of the plurality of thin film transistors are subjected to a rubbing process.
13. (new) The subpixel according to Claim 7, wherein the channels of the plurality of thin film transistors are subjected to a rubbing process.
